This 18” Wide Mini Ductless Fume Hood is one of the most compact negative-pressure hoods on the market. It is designed to protect the operator and environment from hazardous fumes or particulate generated from applications performed within the hood. Its small structure makes it an ideal solution and addition to a lab or room that has limited space or requires only a small containment area. This light-weight hood is also optimal for field-testing applications that require reliable and easily transportable equipment. Typical uses for this fume hood include chemical fume control, pharmaceutical compounding containment, soldering applications, dust removal, biological applications, and many more applications that require the removal of fumes and dust.

The 18” Wide Mini Ductless Fume Hood uses an energy-efficient fan to pull fumes and particulate from the hood into the filter chamber, which is composed of a variety of filter media that is selected depending on the application being performed. This filter media includes HEPA (up to 99.97% efficient on particles 0.3 microns and larger), ASHRAE (up to 95% efficient on particles 0.5 microns and larger), Activated Carbon, and specialty-blended filtration (i.e. Acid Gas, Mercury, Aldehyde, Ammonia).

The 18” Wide Mini Ductless Fume Hood can provide an effective and economical solution for many commercial, medical, laboratory and industrial applications that require a relatively small containment area. For additional visibility, a transparent version is available at extra cost.

Our line of ductless fume hoods are not intended for sterile compounding applications.
